

# Microsoft Defender ATP

**A unified endpoint security platform for prevention, post-breach detection, investigation, and response.**

Microsoft Defender Advanced Threat Protection (ATP) is a complete security solution powered by the intelligent cloud that protects endpoints from cyber threats, detects advanced attacks and data breaches, automates security incidents, and improves security posture. It offers a rich set of APIs to build integrated solutions. Security and data privacy are the priorities of the platform.

Agentless and cloud-powered – built into Windows 10, requires no deployment or infrastructure; Always up to date.

Unparalleled optics - built on the industry's deepest threat insights and shared signals across domains enables synchronized defense and faster response.

Automated security - out of the box automation enables security teams to go from alert to remediation in minutes—at scale.

## How XM Cyber integrates with Microsoft Defender ATP

The XM Cyber Platform helps users of Microsoft Defender ATP to identify and tag their most critical assets. With this additional information, customers have a clear understanding of risk associated with alerts coming from Microsoft Defender ATP. Combining efforts with threat and vulnerability management, the machine tagging is used to incorporate the risk appetite of an individual asset into the exposure score calculation. Therefore, machines marked as "high value" will receive more weight in the exposure score calculation.

### CUSTOMER BENEFITS

- **Attack Simulation** – Breach & Attack, Red Teaming, Auto Pen Testing.
- **Vulnerability Prioritization Technology** – Vulnerability Scan, Vulnerability Prioritization, Patch Management, and IT Hygiene.
- **Security Posture Visibility** – Risk Management, Resource Management, and Compliance Support.
- **Cloud Security Posture Management** – Support for Azure and Office 365.
